LOXLEY LOAD TEAM · OPERATIONS

LOX LOAD DASH User Guide

How to use every app on app.loxload.com

- **Daily Notes** — Shift notes and WOL assignments
- **Error Log** — Selector pallet errors with photos
- **Loader Times** — Run stopwatch and scoreboard
- **WOL Checklist** — Daily Load Team task list
- **Equipment Tracker** — Trucks, stackers, scrubbers and more
- **Store Map** — Division stores, notes and radar
- **PLB Log** — Pallets left behind
- **Trailer Moves** — Yard Driver ↔ Load Desk door board
- **Efficiency Calc** — Hours, loaders and efficiency
- **Load Maps** — Pallet-by-pallet trailer maps
- **Printer** — Blank numbered load map sheets

Loxley Distribution Center · Loxley, AL

Version: October 2026

Start here

LOX LOAD DASH (app.loxload.com) is the home screen for the Load Team. It shows the date and time and has one button for each app. Tap a button to open that app.

Contents

1 · Daily Notes

10 · Load Map Printer
print.andytalbert.com

11 · Store Map
map.loxload.com

Appendix
Codes, a typical day, troubleshooting

Things that work the same in every app

- **Everything is shared and live.** Most apps sync with the server, so every phone, tablet and desk PC sees the same data. A status badge such as `Live`, `Ready` or `Live Sync Online` shows that you're connected.
- **Install as an app.** When you see `Install App`, tap it, or use your browser's "Add to Home Screen". The app then opens full-screen from your home screen.
- **Scanning oLPNs.** In apps with a `Scan` button, you can scan the pallet label with your phone camera. This works best in Chrome on Android. You can also click into the oLPN field and use a hardware scanner, or type the number. The apps remove the `(00)` GS1 prefix for you and keep the 18-digit oLPN.
- **Zones** are always written the same way: `AMB` Ambient · `CHL` Chiller · `DP` Dry Produce · `FRZ` Freezer · `BRD` Bread.
- **Deleting is permanent.** No app has a recycle bin. Some apps ask "are you sure?" first, but others (for example the PLB Log) delete with one tap.

Which app do I use?

I NEED TO...	USE
Leave a note for the next shift or record an issue	Daily Notes
Log a pallet that didn't make its truck	PLB Log

Document a badly built or mislabeled pallet from a selector	Error Log
Put a trailer on a door, assign a run, or pull a finished trailer	Trailer Moves
Time a loader's run and see how many runs are left	Loader Times
Plan staffing hours or check yesterday's load efficiency	Efficiency Calc
Work through the daily WOL task list	WOL Checklist
Map where every pallet sits on a trailer	Load Maps
Find or update a pallet jack, stacker, scrubber, dock plate or sled	Equipment Tracker
Print blank load map sheets for the day	Printer
Look up a store's address, delivery notes or weather	Store Map

APP 1 · DAILY NOTES

Load Desk Daily Notes

OPEN
comms.loxload.com

This is the shared notebook for the day. Every note goes into a section and gets a permanent timestamp, and you can attach photos. Each calendar day gets its own page. Past days are kept as archives that you can export to PDF.

WHO	SHIFT BADGE	PHOTOS
Load Desk leads, WOL supervisors	1st shift until 3:30 PM, 2nd shift from 3:30 PM (Central)	Up to 4 JPG/PNG per note

Set the WOL Assignments (first thing each day)

If any assignment is blank when the day opens, the app asks you to fill them in.

1. Enter names for **1st Shift Load Desk WOL**, **Mid-Shift**, **2nd Shift Load Desk WOL** and **Loading WOL**.
2. Tap **Save Assignments**. The names show in the WOL Assignments card at the top.
3. To change them later, tap **Edit** on the WOL Assignments card.

Add a note

1. In **Add a Note**, pick a **Section** (see the list below).
2. Type your name in **Entered by**, then write the **Note**.
3. Optional: tap **Add pictures** and choose up to 4 photos. You'll see a preview before you save.
4. Tap **Add Note**. The note appears under its section with the date, time and shift.

SECTION	USE IT FOR
Notes	General information and requests (for example, carrier or store requests)
Equipment Moves	Equipment sent to or picked up from stores
Shipment Issues	Problems with shipments, DOs or loads
PLB Info	Pallet-left-behind details to pass on
Dock & Doors	Door problems, dock plates, door changes
Bad Pallets	Damaged or poorly built pallets
Handoff to 2nd Shift	Anything 2nd shift must pick up
End-of-Day / Next-Day Carryover	Open items for tomorrow

Work with existing notes

- **Highlight** marks a note as important so it stands out. Tap **Unhighlight** to clear it.
- **Edit** lets you change the section, the person, the text and the photos (up to 4 in total). Then tap **Save Changes**.

- `Delete` asks for confirmation and **cannot be undone**.
- Tap a photo to view it full size.

Export and archives

- `Export to PDF` downloads today's notes as a PDF.
- `Saved Notes` opens the **Notes Archive**, which lists every day with its number of entries and whether it is *Current* or *Archived*. You can download any day's PDF from there.

> **TIP**
> Use *Handoff to 2nd Shift* and *End-of-Day / Next-Day Carryover* for anything that must not get lost. Highlight the notes that are critical.

APP 2 · PLB LOG

Lox PLB Log

OPEN
plblog.loxload.com

Use this app to record every **Pallet Left Behind (PLB)**, meaning a pallet that didn't make it onto its store's truck. Each entry records the store, zone, OCL and oLPN. The list is shared live, so everyone works from the same PLB list.

Log a PLB

1. Enter the **Store** code (for example `FE11`).
2. Tap `Scan` and point the camera at the pallet label, or scan or type the number into **oLPN #**. The camera window closes by itself once it reads the code.
3. Choose the **Zone**: AMB, CHL, DP, FRZ or BRD.
4. Enter the **OCL** (outbound consolidation location) number.
5. Tap `Add`. The entry is added to the bottom of the table with a **Created** timestamp.

The Entries table

Columns: **Store · Zone · OCL · oLPN # · Created**. Entries are listed oldest first, and new entries from other devices appear without refreshing the page.

- `Export as PDF` creates a printable PDF of the table. Use it for the end-of-shift snapshot or for the carrier.
- `Delete` removes an entry **right away**, with no confirmation.

CAREFUL
The Delete button in the PLB Log doesn't ask before deleting. Check the row before you tap it, especially on a phone.

TIES TO THE WOL CHECKLIST
Checklist items #14 *Pallet Left Behind Log* and #15 *Close Shipments* say to update this log, take an end-of-shift snapshot and record delivery splits.

APP 3 · ERROR LOG

Selector Error Log

OPEN
error.loxload.com
"Lox Pallet Police"

This app documents pallets that a selector built wrong: wrong labels, top or bottom not wrapped, not enough plastic, two pallets used, and so on. Each entry has photos and a follow-up status, so leads can coach the selector and track repeat issues.

Create an entry

1. Tap `+ New Entry` to open **Document Pallet Issue**.
2. **oLPN #** (required): tap `Scan` to read the label's barcode or QR code, or type the number.
3. Fill in **Store** (required), **Zone** (required), **OCL** (optional) and the **Selector**'s name or user ID (required).
4. Add **Pallet Photo(s)** (up to 2) and one **Label Photo**.
5. Optional: describe the problem in **Issue Notes** (for example "BOTTOM NOT WRAPPED").
6. Tap `Save Entry`.

Follow up

Each entry is a card showing its photos, the selector, the date and time, store, zone, OCL, oLPN and notes. Use the dropdown on the card to set its status:

STATUS	MEANING
Needs Follow-up	Logged, but nobody has talked to the selector yet
Followed up with	The selector has been coached
Needs more training	Refer the selector for retraining
Repeat Offender	The same type of issue keeps happening

- The **search bar** searches store, zone, oLPN, selector, notes and status. Type a selector's ID to see their history.
- Tap a photo to enlarge it.
- `Delete` asks "Delete this entry and its photos?" and then removes the entry permanently.

> **TIP**
> Always get a clear label photo. It proves which pallet it was and who picked it.

APP 4 · TRAILER MOVES

LOX Trailer Moves

OPEN
yard.loxload.com
Yard ↔ Desk door board

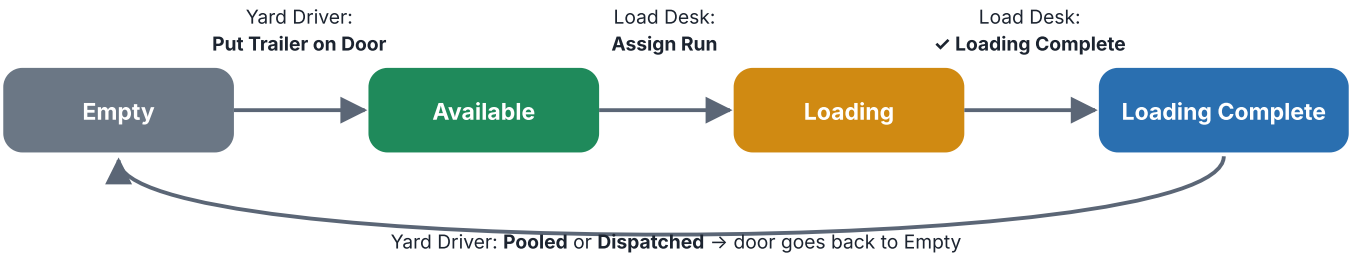

This is a live board of dock doors **10–49**. It's how the **Yard Driver** and the **Load Desk** coordinate: the driver places trailers, the desk assigns runs and marks loading complete, and the driver pulls finished trailers. Every action is recorded in Today's Activity.

DOORS	CONNECTION	ARCHIVE
10 through 49 (40 doors)	"Live — updates connected" must show to make changes	Excel saved nightly at 11:55 PM Central

Pick your view

Tap 🚛 **Yard Driver** (place and remove trailers) or 📋 **Load Desk** (assign runs and loading status). Both views show the same doors, but each one shows only the buttons and instructions for that role. Type your name in **Operator** so your actions are logged under your name. If you leave it blank, the log uses "Yard Driver" or "Load Desk".

The door life cycle

Yard Driver steps

1. **Place a trailer:** on an `Empty` door, tap `+ Put Trailer on Door`, enter the Trailer #, then tap `Make Available`. The door turns `Available` for the desk right away.
2. **Pull a finished trailer:** `Loading Complete` doors flash in your view. Tap `Pooled` (parked on the back line) or `Dispatched` (left the yard), then confirm. The door goes back to Empty.
3. **Dispatch a pooled trailer:** in **Pooled trailers — on site**, find the trailer and confirm that it has left the yard.

Load Desk steps

1. **Assign a run:** `Available` doors flash in your view. Tap `Assign Run`, enter the Run #, and confirm. The door turns `Loading`.
2. **Finish loading:** tap `✓ Loading Complete`, then `Complete Loading`. The Yard Driver sees the door flash.
3. **Return a door to service:** on an `OUT OF SERVICE` door, tap `Return to Service`.

Fix mistakes: Edit Door

Double-click a door card (computer) or **press and hold** it for about half a second (phone or tablet) to open **Edit Door**. Here you can correct the Trailer #, Run # or Status, or tick **Door is OUT OF SERVICE**. Setting the status to *Empty* clears the trailer and run. Manual edits are recorded in Today's Activity.

> **OUT-OF-SERVICE DOORS**
> An out-of-service door shows a red **DO NOT PLACE A TRAILER ON THIS DOOR** warning to the Yard Driver. Mark a door out of service from Edit Door. Only the Load Desk can return it to service.

Search, filters, totals and exports

- The tiles across the top count doors in each state: **Available · Loading · Loading Complete · Empty · Out of Service**.
- **Search trailers / runs** filters the doors and the pooled list. **Show** limits the board to one status.
- Each card shows how long the door has been in its current state (for example "Available for 2 hr 15 min").
- `Export Excel` and `Export PDF` download today's board and activity. `Daily Archives` lists the Excel file saved automatically each night.

> **IF A SAVE IS BLOCKED**
> If someone else changed the same door just before you, your change is stopped so it doesn't overwrite theirs. Close the window, look at the updated card, and try again. If the badge says **Changes paused**, wait for the live connection to come back.

APP 5 · LOADER TIMES

Run Tracker

OPEN
tracker.loxload.com
Admin: tracker.loxload.com/admin

This is a loader scoreboard with a stopwatch on each loader's card. It counts completed runs, times each run and shows how many runs are left for the day. It's made for a shared screen or tablet on the dock.

The scoreboard

- **Total Runs**: today's goal, set in Admin. **Completed**: runs counted so far. **Remaining**: Total minus Completed. **Overall Avg**: the average run time for the whole team.
- Each loader card shows the stopwatch, its state (*Ready*, *Running* or *Last run*), the loader's **Avg time** and their **Runs** count.

Time a run

1. When a loader starts a run, **tap their card once**. The stopwatch starts and the card shows *Running*.
2. When the run is loaded, **tap the card again**. The stopwatch stops, the run is counted, a gong sounds and the averages update.

TIP
On iPhone or iPad, the gong only plays after you've tapped the screen once, because iOS blocks sound until then. A running stopwatch keeps going across refreshes and devices because the server stores the start time.

Admin panel

CONTROL	WHAT IT DOES
Set PIN	Enter the admin PIN if the server requires one. If no PIN is configured, the admin page is open to anyone.
Total runs to be completed → Save Total	Sets today's run goal, which drives Total and Remaining.
Reset Counts	Sets everyone's runs back to zero. Use it at the start of a new day.
Undo Last Tap	Reverses the most recent tap. Use it after an accidental start, stop or count.
Loader names → Save Loaders	One name per line. If a name matches an existing loader (ignoring capitals), that loader keeps their counts. You can reorder names freely.
Live status	Shows the current state the server has for every loader.

SECURITY
Make sure an `ADMIN_PIN` is set on the server. Otherwise anyone with the link can reset counts.

APP 6 · EFFICIENCY CALC

Load Tools

OPEN
ops.loxload.com

Two quick calculators. **Daily Plan** works out the hours and loaders you need for the day's workload. **Load Efficiency** works out how efficiently a shift actually loaded. Nothing is saved; the calculators just do the math.

Daily Plan (before the shift)

1. Enter **Runs**, **Backhauls** and **Diversions**.
2. Tap **Calculate hours**.
3. Read **Hours needed**, **Loaders needed**, **1st shift runs** and **2nd shift runs**.

FORMULA
Hours = (Runs + Diversions) ÷ 0.67 + 0.5 × Backhauls
Loaders = Hours ÷ 8
Shift split 65% / 35%. 1st shift is rounded down and 2nd shift gets the rest.

Load Efficiency (after the shift)

1. Enter **Runs**, **Backhauls**, **Diversions** and **Total hours** worked.
2. Tap **Calculate efficiency**.
3. Compare the result with the **0.67** target.

FORMULA
Efficiency = (Runs + Diversions) ÷ (Hours − 0.5 × Backhauls)

Worked example

INPUT	DAILY PLAN	LOAD EFFICIENCY
60 runs, 2 diversions, 4 backhauls	(60 + 2) ÷ 0.67 = 92.5, plus 0.5 × 4 = 2.0, so **about 94.5 hours**, which is about 11.8 loaders at 8 hours each	With 95 hours worked: 62 ÷ (95 − 2) = **0.67**, which is on target

A backhaul counts as half an hour of work. Diversions count the same as runs.

APP 7 · WOL CHECKLIST

Load Team WOL

OPEN
checklist.loxload.com

The daily task list for the Load Team, split into **Load Shift 1** (16 tasks) and **Load Shift 2** (5 tasks). Progress is saved on the server for each day, and the percentage at the top shows how much of the day is done.

How to use it

1. Type the **WOL Supervisor** name at the top.
2. When you finish a task, tap its **check box**. For tasks done more than once a day (such as the 3× Daily snapshot), each tap adds one: 1/3, 2/3, 3/3. One more tap resets the task to 0.
3. Optional: fill in **Assignee** and **Note / follow-up** on any task. These save when you leave the field.
4. At the end of the day, go through **Turnover & Outstanding Tasks** with the incoming shift lead.
5. Tap `Save PDF Now` to save the checklist. `PDF Archive` lists saved PDFs from earlier days.

Task list

#	TASK	WHEN	WHAT TO DO
Load Shift 1			
1	Turnover meeting	Daily	Meet with 3rd shift and pull together late load and PLB information.
2	Verify all shipments are closed	Daily	Check that the previous day's shipments are closed. Follow up on loading-in-progress shipments and PLBs.
3	3rd party carrier initial communication	Daily	Collect PLB information, check the PLB process guide, and update the late-load sheet for stores.
4	Cleanout	Daily	Assign cleanouts to loaders.
5	Tour visualization and PLB log	3× Daily	Export snapshots at 5 AM, 8 AM and 12 PM. Log PLBs and late loads, and mark the 12 PM snapshot as important.
6	ASN/GI check	Daily	Confirm the ASN/GI filters show no shipments or DOs that need ship confirmation.
7	Empty trailer availability	Daily	Before the first wave, make sure every available dock door has a trailer.
8	Monitor shipment audit report	Daily	Make a preliminary bay and trailer loading plan, and update ToVI.
9	Eggs/flowers/milk/load-picked items	Daily	Collect and organize oLPNs after the wavemaster runs the waves.
10	Run sheets	Daily	Print run sheets from the Shipments UI and the Shipment Audit Report. Attach the matching oLPNs and the load map.

11	OCL maintenance	Daily	Check that OCLs are empty after each load is turned in.
12	Trailers	Hourly	Do trailer checks.
13	Store equipment / shelving	Daily	Get ready any equipment that stores have requested.
14	Pallet left behind log	Daily	Update the PLB log and take an end-of-shift snapshot. Make sure delivery splits are recorded.
15	Close shipments	Daily	Close shipments after loading, and record delivery splits in the PLB log.
16	Eggs/bread	As needed	Keep eggs and bread in active locations, and check deliveries after load hours.
Load Shift 2			
17	Check shipments / errors / unplanned DOs	Daily	Check that shipments were released without WMOS errors. Check next-day unplanned DOs and blank OBDs.
18	All shipments closed	Daily	Confirm all shipments are closed at the end of the day.
19	Delivery splits shipped	Daily	Use the Delivery Split DOs saved filter, and check that every PLB sent out is ship-confirmed.
20	All DOs in status shipped	Daily	After the SHPs close, confirm all DOs are shipped. Close the LOAD WOL and check the ASN sent status.
21	Non-merch items	Bi-weekly	Take inventory of non-uniform, non-merch supplies.

APP 8 · LOAD MAPS

Load Map

OPEN
loadmap.loxload.com
Archive: /archive

A digital map of each trailer that tracks every pallet. You record which of the 30 positions each pallet is in, from the nose to the doors, with its oLPN, store and type. The map also holds the trailer details, sanitary checks and notes. It totals pallets by type automatically and prints a clean PDF.

Start a map

1. Tap `New map`. The app asks **What stores are Loading?** Enter up to 4 store codes and tap `Use these stores`. These become quick-pick buttons. You can change them later with `Edit stores`.
2. Fill in **Run #**, **Trailer #**, **Door #** and **Loader**.

Add pallets

The **Trailer Map** shows 30 positions in two columns, from **TRAILER FRONT / NOSE** to **TRAILER DOORS / REAR**. Tap a position to open **Edit Pallet**:

- **oLPN**: tap `Scan`, use a hardware scanner, or type it. It must be 18 digits, or a label with the (00) prefix. If you scan an oLPN that's already used in another position, the app warns you.
- **Store #**: tap one of your store buttons, or type it.
- **Type** (required): Frozen, Chiller, Ambient, Eggs, Bread, Dry Produce, Flower or Equipment.
- **More details**: the **Zone Letter** (F, C, M, E, A, B, DP, FL) and **Bulkhead after this pallet**, which draws a divider at that position.
- `Save` saves the pallet. `Save & scan next` saves it and jumps to the next empty position, keeping the same store and type. `Clear` empties the position. `Undo` reverses your last change.

> **FASTEST WAY TO LOAD**
> Tap `Scan pallets` to turn on scan mode. Choose the first position, scan, and tap **Save & scan next** for each pallet. The store and type carry forward, so you usually only need to scan.

Finish the paperwork

- **Load details, counts & notes**: Title, Fuel Level, Loaded Temp, Driver, # oLPNs, Date, plus PLBs Loaded, PLBs Created, Rebuilds, Rewraps and Consolidations.
- **Sanitary Transport Requirements**: answer Yes or No to all four questions: (1) Is the trailer temperature set and cooling correctly? (2) Is the trailer in OK condition? (3) Are the pallets stable and the items secured? (4) Are the bulkheads in place, with OK airflow?
- **Loader Notes** and **Driver Notes**.
- The **Total Truck Pallet Count Summary** fills in by itself: Frozen, Chiller, Ambient, Eggs, Bread, Dry Produce, Flower, Equipment and Total.

Save, print and find maps

- `Save map` saves to the server. `Print / PDF` prints the map. `Delete` removes it permanently. `Close` returns you to the list.
- **Drafts save themselves** on your device as you work, even with no signal. Drafts saved while offline upload once you're connected again. If the app closes, tap `Resume saved draft`.
- **Today's Load Maps** lists today's maps by run number, lowest first (Central time). Use **Search** to find a run or trailer.
- `Archive` opens past days. Pick a **Date folder**, then **View / Print** or **Download JSON**.

APP 9 · EQUIPMENT TRACKER

Lox Equipment Tracker

OPEN
equipment.loxload.com

The inventory of warehouse and loaner equipment: walkie trucks, stackers, scrubbers, dock plates and sleds. It records where each piece is, what condition it's in, and every change made to it. Changes sync live to everyone.

Add a piece of equipment

1. In **Add Equipment**, enter the **Serial #** (asset tag, required).
2. **Owner**: the unit name, such as `WLK 01`, `STK 03` or `Loaner SCRB 04`. **Brand**: such as Raymond or PowerBoss.
3. Choose the **Model** (Truck, Stacker, Scrubber, Dock Plate or Sled) and the **Status**.
4. **Location**: `WH` for the warehouse, or a store code such as `FK90` or `FE11`. Set **Air Tagged** to Yes or No, and add any **Notes**.
5. Tap `Save Equipment`.

Statuses

STATUS	USE WHEN
Working	The equipment is in service
Needs Repair	It's broken or has a reported problem
In Maintenance	It's being repaired
WH	It's parked or held at the warehouse
Out of Commission	It's retired or can't be used

Find and update equipment

- The count tiles show how many items are in each status. The record count (for example "62 of 62 records") updates as you filter.
- Use **Search** (serial, owner or location) and the **status filter** to narrow the list.
- On a card, `Edit` loads the record into the form at the top. Change it and save, or tap `Cancel Edit`.
- `History` opens the **Audit Trail**, which shows every change made to that item and when.
- `Delete` asks for confirmation and cannot be undone.
- `⬇ Export to Excel` downloads the list as currently filtered.

MOVING EQUIPMENT TO A STORE

Edit the item, change **Location** to the store code, and add a note such as "Sent to FP34 10/27". Also log the move in Daily Notes → *Equipment Moves*.

APP 10 · PRINTER

Print Load Map Generator

OPEN
print.andytalbert.com

This app creates a PDF of **blank paper load map sheets** for the day. Each page has the date and a run number (1, 2, 3, ...), so you can print one stack each morning and hand them out.

Print today's sheets

1. Enter the **Date** as **MM/DD/YY** (for example 10/28/26).
2. Enter **Runs (copies)**, which is the number of sheets you need (up to 300).
3. Tap `Generate PDF`, then open and print the file.

Recent Files

Every PDF you generate is kept under **Recent Files** with a name like `Load_Maps_10-27-26_....pdf`. Tap `Download` to print it again.

CHECK THE DATE FORMAT

The date is printed exactly as you type it. A typo such as 02/02/02 still produces a full set of sheets, so check the date before you print.

PAPER OR DIGITAL?

The Printer makes blank paper sheets. The **Load Maps** app (App 8) is the digital version, with scanning and automatic totals.

APP 11 · STORE MAP

Store Map — Loxley Division

OPEN
map.loxload.com

An interactive map of the division's **112 stores** in Alabama, Mississippi, Louisiana, Florida and Georgia. It has shared delivery notes, flags for stores that can't receive a truck, directions, and live weather radar.

Find a store

- Type in **Find a store** to search by store code, city, address, ZIP or state. Use the **State** dropdown to show one state.
- Tap a store in the list to zoom to it and open its details. `Fit results` zooms to fit every matching store, and `Reset view` clears your search and filters.

Read the pins

PIN	MEANING
Colored dot	A normal store. The color shows the state: AL blue, MS purple, LA orange, FL green, GA rose.
N (blue)	The store has delivery notes saved
! (red)	**UNABLE TO RECEIVE TRUCK**

Turn **Store codes** on or off to show or hide the code labels next to the pins.

Store details and delivery notes

1. Tap a pin. The popup shows the store code, city and address, a `Get directions ↗` link that opens Google Maps, and the delivery notes form.
2. Tick **UNABLE TO RECEIVE TRUCK** if needed, and add **Location notes** such as delivery restrictions, entrance instructions or contacts.
3. Tap `Save status & notes`. When you see "Saved to server for all users", **everyone** can see the note. The map checks for updates every 5 seconds.

> **CHECK THE CONNECTION**
> The "About these locations" panel shows "Shared notes connected" when you're online. If it says notes are unavailable, wait for it to reconnect before you save.

Map views and weather radar

- **Basemap**: *Street map* (the default), *Dark map* or *Satellite*.
- `3D` tilts and rotates the view. With a mouse, right-click and drag (or hold Ctrl and drag). On a touch screen, drag up or down with two fingers to tilt, and twist to rotate. Click the compass to face north again.

- **Radar** overlays NEXRAD weather radar from the Iowa Environmental Mesonet, which refreshes every 5 minutes. Tap `▶ Loop` to play the last 50 minutes. The time label shows "Live" or how old the frame is. Your browser remembers whether radar is on.

Adding locations and backups

- `+ Add location` lets you enter a store code, state, address, city and ZIP. Then paste the latitude and longitude, or tap `Choose point on map`. **Added locations are saved only in that browser.** Use `Backup locations` and `Restore backup` to copy them to another device. You can edit a location you added from its popup.
- For the shared delivery notes, `Backup delivery notes` downloads a JSON file and `Restore delivery notes` uploads it for everyone. `Import this browser's old notes` moves notes from the old version of the map that were saved on your device.
- **Download all locations as CSV** exports the full store list.

Appendix

A typical day with these apps

WHEN	WHAT HAPPENS	APP
Start of 1st shift	Set the WOL assignments, hold the turnover meeting, and enter the supervisor's name on the checklist	Daily Notes, WOL Checklist
Morning setup	Print blank sheets, plan hours and loaders, and set the run total and loader names	Printer, Efficiency Calc, Loader Times (Admin)
Before first wave	Yard Driver puts empty trailers on every open door	Trailer Moves
Loading	The desk assigns runs, loaders tap their cards to start and stop, and pallets are mapped	Trailer Moves, Loader Times, Load Maps
As it happens	Log PLBs, document selector errors, track equipment moves, check store notes and radar	PLB Log, Error Log, Equipment, Store Map
Loads finish	Mark loading complete, then the Yard Driver pools or dispatches the trailer	Trailer Moves
Shift change	Write handoff notes and go through outstanding tasks	Daily Notes, WOL Checklist
End of day	Export the PLB PDF, save the checklist PDF, check load efficiency. The yard archive saves itself at 11:55 PM.	PLB Log, WOL Checklist, Efficiency Calc

Codes and terms

TERM	MEANING
oLPN	Outbound license plate number. This is the 18-digit pallet ID on the label, sometimes printed with a (00) prefix.
PLB	Pallet Left Behind: a pallet that didn't ship on its truck
OCL	The outbound consolidation location the pallet was staged in
WOL	Warehouse Operations Lead
AMB / CHL / DP / FRZ / BRD	The zones: Ambient, Chiller, Dry Produce, Freezer, Bread
Pooled	A loaded trailer moved off the door and parked on the back line until it's dispatched
Dispatched	A trailer that has left the yard
Bulkhead	A divider inside the trailer, marked after a pallet position on the load map
Backhaul / Diversion	Workload types used by the Efficiency Calc. A backhaul counts as 0.5 hours, and a diversion counts the same as a run.

Troubleshooting

PROBLEM	TRY THIS
The camera scan button says scanning isn't supported	Use Chrome on Android, or tap the oLPN field and use a hardware scanner, or type the number.
Trailer Moves says "Changes paused"	The live connection dropped. Wait for "Live — updates connected" to come back before you tap anything.
A door change was rejected	Someone else updated that door first. Close the window and redo your change on the updated card.
The Run Tracker gong is silent	Tap the screen once (iOS needs this) and check that the device isn't muted.
A load map was lost when the browser closed	Reopen Load Maps on the same device and tap **Resume saved draft**.
A store I added is missing on another device	Added locations live in one browser. Use Backup locations, then Restore backup on the other device.
The Store Map is slow or blank	It loads a full 3D map. Give it a moment on slow connections, or switch the basemap to Street.
